# MOVING YOUR BUSINESS TO THE CLOUD

6 Essential Steps Toward Implementing Cloud Services

1
Determine which of your business' resources are prime candidates for a move to the cloud; this will help you select the best cloud provider for the job.

2
Assess your budgetary constraints and how much you are able to invest in cloud services.

3
After selecting your cloud service provider, determine whether you need to implement infrastructure changes prior to rolling out cloud services across your organization.

4
Decide on the appropriate time-frame for a successful roll-out.

5
Prepare your IT team to handle their new workflow, and train them to ensure they are prepared to provide support to your employees.

6
Keep your employees in the loop at all stages of the roll-out plan and prepare them to handle the new procedures required to work with the new platform.

Are you thinking about moving your business to the cloud? Let's talk! We are here for you and happy to serve.
